

## Prequalified ESCO Lists

---

An energy performance contract (EPC) is one way to finance an LED streetlight conversion. In an EPC, an energy services company (ESCO) guarantees the savings from the measure(s) installed will cover the debt the municipality incurs to pay for the project. Therefore, in order to undertake an EPC the streetlights must be owned by the municipality. (If interested in learning more about LED conversion and streetlight ownership please check-out the legislation section on this website.)

Below are links to three different lists of qualified ESCOs. The ESCOs on these lists have met rigorous prequalification criteria from each associated organization and would be eligible to bid for an EPC for LED streetlight conversion.

If interested in exploring the option of an EPC to finance an LED streetlight conversion project, please contact the program for additional information.

(**NOTE:** We have included the weblinks to the various lists as they get updated periodically.)
